

SANJIN **ŠARIĆ**

STAFF SOFTWARE ENGINEER

CAREER SUMMARY

Product engineer with over a decade across frontend and backend, and most recently production agentic AI systems. I own product areas end to end, from architecture through shipping, and work across teams on the tooling, standards, and technical direction a codebase is built on.

I started in telecommunications, moved into web development as a backend developer and grew into frontend across the JS ecosystem, WebGL, Ruby on Rails, and .NET. Today I work as a product engineer: I ship features that actually help users, push back when a request doesn't add up, and set the direction — monorepo, CI/CD, testing standards — that teams build within. New product areas start as a quick POC in front of stakeholders; AI agents and the workflows around them are part of that toolkit.

> *"Jack of all trades, master of none, but better than master of one"*

WORK EXPERIENCE

Present – Jun 2025

Prezi

Senior Software Engineer (cross-team)

Technologies: React, Next.js, TypeScript, TipTap / ProseMirror, Yjs, AWS, Playwright, Mastra, Claude Code

- Re-architected Prezi's AI slide generation from flow-based layout to absolute positioning after two failed prompt reworks, pushing the invasive rewrite through a hard build-and-test cycle; cut overflow defects from ~20% to ~5% of generated slides, improved run-to-run consistency, and unlocked output formats beyond slides.
- Delivering the production-grade slide editor that replaces the original prototype: TipTap/ProseMirror on top of Yjs, with collaborative state syncing reliably across ~30 backend pods and a focus on data integrity under concurrent edits.
- Own the conversational AI agent Prezi customers use to generate and edit presentations through chat, from architecture to production: an orchestrator routing to specialist tools for branding, translation, redesign, and content editing.
- Led a Prettier rollout across a decade-old, multi-team codebase (~145k lines changed across 3 teams over 3 weeks) with a phased plan that avoided merge conflicts with in-flight work; adopted as the company standard.
- Built an internal admin tool that surfaces real user generations, cutting bad-generation triage from minutes to seconds.
- Partner with the VP of Design to ship static marketing pages via LLM-driven development: review their code, set up A/B tests and feature flags, and provide the guardrails that let a non-engineer ship to production safely.

Jun 2025 – Jun 2023

Journee Technologies GmbH

Senior Software Engineer

Technologies: React, Nest.js, TypeScript, AWS, Tailwind CSS, Playwright, Cucumber, Prisma

- Migrated the video-conferencing system from the sunsetted Dolby API to the Vonage SDK for sessions of 5 to ~20 participants, then refactored it onto a state machine that reduced connection-drop bugs and made errors traceable.
- Made the core frontend architecture decisions and introduced Playwright E2E testing and developer tooling that improved DX and shipping velocity.
- Led the modernization of the company's public website with a redesign in PHP and Tailwind CSS.

Jun 2023
Mar 2021

Philipa Legal Tech

Tech Lead

Technologies: React, TypeScript, Nx, ProseMirror, C#, .NET Core, Azure Pipelines, Cypress, Playwright, MSSQL, MongoDB

- Led a 4-engineer team (staff, senior, medior) and drove the core architecture decisions: the Nx monorepo, testing practices, and CI/CD standards the whole team built within.
- Sole owner of CI/CD for four applications plus a monolith backend; kept PR pipelines under 10 minutes and full E2E runs under 20 as the suite grew, via job parallelization, change-scoped runs from the Nx graph, and flakiness control.
- Built a rich-text legal document editor from scratch on ProseMirror.
- Aligned engineering, product, and C-level stakeholders on scope and feasibility without formal authority.

Mar 2021
Dec 2019

Comtrade

Lead Engineer

Technologies: React, Nest.js, TypeORM, Kafka, GitLab CI

- Refactored a Nest.js + TypeORM backend to support multitenancy and introduced event sourcing with Kafka.
- Set up build environments and ESLint/TypeScript standards for new projects, raised integration test coverage, and hosted React best-practices workshops for the engineering team.

Oct 2019
Jan 2019

Evomecs GmbH

Software Engineer

Technologies: React, Relay, .NET Core, GraphQL

- Consolidated Webpack/Rollup build systems; shipped React/Relay frontend and .NET GraphQL backend features.

Jan 2019
Mar 2016

Social Explorer Inc.

Software Engineer

Technologies: React, WebGL, Ruby on Rails, JavaScript

- Built React/WebGL features and maintained the company fork of mapbox-gl-js; wrote a bootstrapping script that saved 4–6 developer hours per new hire.

Mar 2016
Apr 2015

GlobalGPS BH

Software Engineer

Technologies: Java, OSGi, Android

- Developed OSGi Java API endpoints and bootstrapped the company Android application.

SKILLS

Languages & Data
TypeScript, JavaScript, C#, Ruby, SQL (PostgreSQL, MSSQL), Supabase, MongoDB, Kafka

Frontend
React, Next.js, Redux, Tailwind CSS, ProseMirror, WebGL

Backend
Node.js, Nest.js, .NET Core, GraphQL, Prisma, Ruby on Rails

AI / Agents
Agent orchestration & tool routing, Claude / Anthropic API, Mastra, Claude Code, LLM-driven development, Retrieval (RAG)

Infra / DevOps
AWS, Docker, Nx, GitHub Actions, GitLab CI, Azure Pipelines

Testing
Playwright, Cypress, Jest, Cucumber

EDUCATION

2015
2013

Masters, Telecommunications

Faculty of Electrical Engineering, Sarajevo — thesis: NFC attendance system (Android)

2013
2010

Bachelors, Telecommunications

Faculty of Electrical Engineering, Sarajevo — thesis: reconfigurable active RC filter

LANGUAGES

Bosnian	Native
English	Proficient (C1)
German	Basic (A2)

INTERESTS

A good portion of my free time goes to physical activities. I also enjoy reading books on self-development and upgrading my leadership skills. I am a solid cook and work on that skill whenever I can — I love cooking all types of food and even took a cooking course. Two dogs and two cats keep my schedule relatively busy and active.
